

```
#!/usr/bin/env python
```

```
import requests
```

```
r = requests.get('http://www.cnn.com/')
```

```
print r.content
```

# Crawling with Python

```
#!/usr/bin/env python  
import requests  
  
r = requests.get('http://www.cnn.com/')  
print r.content
```

**Then what?**

# Web Scraping framework
